Summary

Backend Developer focused on building scalable and high-performance systems. Experienced in designing robust APIs, optimizing system performance, and developing backend solutions for production-grade platforms with real-world impact.

Education

Sri Venkateshwara College of Engineering, Bengaluru — **CGPA: 8.8**
Bachelor of Engineering in Information Science & Engineering — *May 2025*

Vidya Mandir Independent PU College, Bengaluru — **97.6%**
12th – PCMC — *Jul 2021*

Work Experience

Skysecure Technologies Private Limited, Bengaluru | *Backend Developer* Nov 2025 – Present

- Developed scalable REST APIs handling high-volume requests with focus on performance, reliability, and maintainability
- Engineered a real-time wallet and usage tracking system, mapping AI token consumption to coin-based billing with live deduction and dashboard visibility
- Built backend systems for Zero Trust and DPDP security assessments, integrating Microsoft Graph APIs with Entra ID app registration to fetch tenant data and generate automated reports
- Designed and implemented backend features for admin panels and marketplace workflows, including product management, reviews, and system control functionalities
- Optimized backend performance using Redis caching and asynchronous job processing with BullMQ, improving API response times by 20–30%; deployed using Nginx on Azure
- Designed systems with a focus on scalability, fault tolerance, and efficient resource utilization

Emeelan Solutions Pvt Ltd, Bengaluru | *Software Developer Intern* Sep 2024 – Feb 2025

- Developed an Electron & React AI chatbot for interactive database querying reducing query time by 40%
- Automated Jira workflows and built Jenkins CI/CD pipelines with Slack notifications, reducing manual effort by 75% and improving deployment cycles
- Managed containerized microservices using Docker and Kubernetes, integrating Kafka with PostgreSQL for scalable event-driven architecture

Projects

CodeSense: AI Powered Code Reviewer |*React, Flask, Ollama LLaMA 3.2, GitHub Actions* (GitHub)

- Built an automated code review platform providing context-aware feedback on performance, optimization, error handling, code structure and security across multiple programming languages
- Developed the application with React.js, Vite and Tailwind for frontend and Flask for backend code submission workflows
- Incorporated Llama 3.2 model and Google Gemini API for intelligent code analysis and implemented GitHub Actions integration enabling users to run custom YML files in repositories to generate detailed review reports

House Hunt Hero: ML-based House Price Prediction |*Python, NumPy, Pandas, Matplotlib, Flask*

- Predicted house prices using Linear Regression Algorithm and RMSE for accuracy
- Utilized datasets from Kaggle, implemented using NumPy, Pandas, Matplotlib, Flask, and Jupyter Notebook
- Achieved significant improvements in prediction accuracy through feature engineering and data visualization

Automation Testing of an E-commerce Site |*Selenium WebDriver, Java*

- Built automation scripts for functional test cases, checkout flows, and billing updates of an E-Commerce website
- Integrated logging, reporting, and test data creation to deliver a scalable QA solution

Technical Skills

Programming: JavaScript, Python, SQL, Java
Frameworks & Libraries: Node.js, Express.js, React.js, Flask, Django, Selenium WebDriver
Databases: MongoDB, PostgreSQL, Redis
DevOps & Cloud: Docker, Kubernetes, Jenkins, Kafka, CI/CD, AWS, Azure, Nginx, Linux
Tools & Others: REST APIs, Microservices, Git, GitHub Actions, Postman, Joi, JWT

Achievements and Extra-Curricular Activities

- Secured **1st Place** in **Smart India Hackathon 2024** and **TATA InnoVent Challenge** (College Level)
- **Co-founder, AI Synapse Society** – Initiated the AI Club to educate juniors on emerging AI technologies

Hobbies: GFX/VFX, Keyboard, Basketball, Art
